Introduction: The Transfer of Tasks (ToT) initiative, an industrial relations agreement, involves the transfer of phlebotomy and cannulation tasks from non-consultant hospital doctors (NCHDs) to nurses in acute Irish hospitals. It aims to facilitate timely, effective patient interventions. This national strategy was first enacted in 2016. St. James’s Hospital, Dublin instigated the process in May 2017 with a local implementation team delivering standardized training. We conducted a study to determine the impact of nurse training on NCHD task workload.

Methods: A prospective study gathered data on the number of phlebotomy and cannulation tasks per hospital ward performed by NCHDs over a three-week period from March 5th to March 25th 2018. Average times per task were obtained using observational methods. Point prevalence analysis of nurse training rates was performed at the end of data collection. Indices related to ward-based nursing work demands were obtained concurrently. Wards not involved in the ToT initiative were excluded.

Results: Eighteen wards were included in the study. 464 phlebotomy and 326 cannulation tasks were performed by NCHDs (n=42) over a three-week period. Average times per task were 10 minutes and 15 seconds (SD 5 minutes and 51 seconds) per phlebotomy task and 11 minutes and 8 seconds (SD 3 minutes and 11 seconds) per cannulation task respectively. Nursing training rates did not consistently correlate with number of tasks performed by NCHDs. Reduced ward-based nursing work demands were not significantly associated with a reduction in tasks performed by NCHDs.

Conclusions: In spite of intensive training, organizational management oversight and a standardized national initiative, nursing training rates are not consistently inversely correlated with the number of tasks performed by NCHDs. Human factors like interpersonal relationships, attitudes towards task reallocation and job-design factors may impact upon the implementation of ToT.

Biography
Lucy Chapman was elected a Scholar in Medicine of Trinity College Dublin, Republic of Ireland in 2010 and subsequently graduated in 2013 in the 93rd centile. She is pursuing a Masters in Health Informatics in Medicine of Trinity College and has a keen interest in quality improvement in healthcare. Currently, she is a Physician Lead on the implementation of an electronic medical record at St. James’s Hospital and is pursuing future specialist medical training in the area of geriatric medicine.
