Although there are many awareness and promotions on recycling units, there's still a void in the market place for attractive, sanitary and safe recycling and refuse centers. Today people need sustainability in every product, we at Solar Outdoor Media UG made a green initiation to promote recycling and a healthy community connection with cities and their people in an eco-friendly way. Solar Wi-Fi Eco Bin is a recycling and refuse center that measures approximately 4’ by 6’ and it features a solar powered advertising media space on all four sides of the BIN, making it so appealing to companies and entities that employ them. The solar panel on top powers internal batteries which automatically illuminate all the side panels in the night, makes the Solar Wi-Fi Eco Bin a lucrative opportunity. It also enabled with a built-in Wi-Fi extender that creates an internet hotspot for consumers, and 4 USB ports for mobile devices. Solar Wi-Fi Eco Bin is a smart, eco-friendly and economical product which creates a recycling center that gives the consumers/customers mobile charging and Wi-Fi, and allows the operator to make money. It’s an appealing product for municipalities, hospitals, educational facilities, public recreation areas, sports arenas and entertainment venues. We are also planning to connect this system on grid (Hybrid System) i.e. once the battery is fully charged excess solar power not required can be exported to the grid via meter. When the solar system is not in use, and if the battery is drained then it start drawing power from the grid. Hybrid systems are also able to charge the batteries using cheap off-peak electricity (usually after midnight to 6 am). Thus makes our Solar Wi-Fi Eco Bin more green and sustainable.
