

## Acknowledge to Journal Of Medical Research And Health Education

Received : July 01 2021; Accepted : July 21 2021; Published : July 30 2021

### Editorial Note

I am honoured to introduce the “Journal of Medical Research and Health Education”. The journal is an online, open access and peer-reviewed international journal that is committed for expeditious publication of articles that draw a compass of the themes related to Health education, Pre-Clinical Research, Clinical Research and Epidemiological Research mostly concentrating on human welfare. The journal publishes bi-monthly, as it gives a substantial platform to the researches, scientists to share, discuss and explore to the innovative ideas, developments in regard of the Medical Research and Health Education. Also, the journal aims to publish high quality papers which includes original research or brief communications, comprehensive or mini-review articles that reflects new insights on Medical Research and Health Education.

Medical Research is the scientific process of developing new and effective ways of medical treatment to improve the quality of life of human race. Researchers identify the problem and come up with an idea to combat it by creating a study plan and continue to test the idea. The Pre-Clinical Phase involves testing of the idea in laboratory. The new idea is developed into a physical form and it is tested for safety and efficacy. In the Clinical Phase, the idea is tested on humans and the results are analyzed for safety and efficacy. In the event of fruitful results the new idea hits the market.

Health Education is a form of structurally designed motive to positively influence health and prevent disease, disability and premature death for the individual and also the community. Health Education involves the education – driven behavior change activities drawn from the underlying biological, psychological, physical, medical, social, economic and environmental conditions impacting on individual health, and use of the health care system.

The main objective of the Journal is to provide an original information round the globe. Here we publish all types of the Researches that are specifically related to Medical Research and
