

## Announcement - Dementia Congress 2021

After the successful completion of 13th World Congress on Advances and Innovations in Dementia we take this opportunity to announce. Dementia congress 2020, 14th World Congress on Advances and Innovations in Dementia, which is held during August 26-27, 2020 at Singapore. The main theme of our conference is “Exploring the Challenges and Excellence in Dementia Research” which covers wide range of critically important sessions. It’s a platform to bring all the neuroscientists together to share their experiences it’s the amalgam of scientific research as well as innovative ideas.

Neurological disorders are diseases of the brain, spine and the nerves that connect them. There is ample evidence that pinpoints neurological disorders as one of the greatest threats to public health. There are more than 600 diseases of the nervous system, such as Alzheimer’s disease, Brain tumours, Epilepsy, Parkinson’s disease, and Stroke, Dementia as well as less familiar ones such as front temporal dementia.

In the present day scenario a wide population of mankind are plagued by mental and neurological illnesses, with almost 165 million people or 38 percent of the pop-

ulation suffering each year from a brain disorder. With only about a third of cases receiving the therapy or medication needed, mental illnesses cause a huge economic and social burden, it found the cost burden of these and neurological disorders amounted to about 386 billion euros (\$555 billion) a year. An estimated 6.8 million people die every year as a result of neurological disorders.

Neurological disorders public health challenges describes and discusses the increasing global public health importance of common neurological disorders such as dementia, epilepsy, headache disorders, multiple sclerosis, neuroinfections, neurological disorders associated with malnutrition, pain associated with neurological disorders, stroke and traumatic brain injuries.

National Alliance provided fund of \$650 million to fuel the research on mental illness. NARSAD Young Investigator Grant provides \$30,000 per year on research in Neural and behaviour disorders such as dementia, schizophrenia, mood disorders, anxiety disorders, or child and adolescent mental illnesses. Brain tumour research receives less than 1% (0.7%) of national cancer research spending in the UK.

In order to accelerate the research in the field of Neuroscience Conference Series organizes different conference series worldwide.
