Editorial

"15th International Conference on Material Science and Materials Technology " is going to be held in Brussels, Belgium during September 19-20, 2022. Materials Technology 2022 gives the basic ideas related to the innovation of new materials and technologies for sustainability. The field of materials science and engineering involves a wide range of sectors of markets growing respectively like Engineering resins, Polymer alloys and blends, advanced batteries and fuel cells and so on. The Materials Technology 2022 technical program is unmatched, addressing structure, properties, processing, and performance across the materials community. Materials Technology 2022 brings together scientists, engineers, students, suppliers, and business leaders to discuss current research and technical applications, and to shape the future of materials science and technology.

Materials Technology is evolving every day. Millions of chemical and material combinations create challenges for scientists when applying them to real world applications that consumers touch every day. Keeping abreast of the latest trends in material science across a wide range of industries can be a daunting task. It generally has superior properties than conventional materials available. They can outperform conventional materials, in terms of their applications. They are materials that are novel or have undergone modifications in existing materials to gain superior performance with respect to one or more characteristics that are essential for the applications under consideration.
