Meetings International delightfully welcomes you to attend the International Conference on Clinical Microbiology which is scheduled in Toronto, Canada during September 28-29, 2022 which includes keynote presentations, Oral talks, Workshops/Symposia, Poster presentations, and Exhibitions. The theme of the conference is "Modern research and technologies in microbiology". Clinical microbiology 2022 is the premier event that brings together a unique and international mix of experts, researchers, and decision-makers both from academia and industry across the globe to exchange their knowledge, expertise, and research innovations to build a world-class Clinical Microbiology conference. World-renowned speakers, the most recent techniques, developments, and the newest updates in Microbiology are the hallmarks of this conference. This Clinical Microbiology conference will deliver a comprehensive overview of the latest information, insights and practices in microbiology.

Several microorganisms are used in industrial microbiology, including laboratory-selected mutants, naturally occurring organisms, and genetically modified organisms (GMOs). Microbiology research and development is finding increasing application in oil and gas organizations, the food and beverage industry, and environmental testing organizations. In addition, the traditional R&D in the biopharmaceutical industry is witnessing an upsurge, due to drug development research, which is helping in the augmentation of the industrial microbiology market.

Increased demand for nutraceuticals and other fermented products further drives the importance of industrial application of microbiology on a large scale. Such factors are helpful to drive the industrial market. However, in the market, there are several conflicts observed regarding the usage of genetically modified organisms in food sources, which are expected to restrict the growth of the industrial microbiology market.
