

# Challenges of elderly patients with short bowel syndrome

Maryam Said Rashid Al Hashmi

Khoulia Hospital, Oman

## Abstract

**Objective:** This is a case report presenting two elderly patients; one with mesenteric ischemia and the second with gallstone ileus, in which their operative management has resulted in short bowel syndrome (SBS).

**Case:** This pathology required prolonged post-operative care and monitoring with the management of different related complications.

**Conclusion:** This case report will cover the pathophysiology, medical and operative management in addition to the acute and chronic complications of SBS. Keywords: Short Bowel, Syndrome, Mesenteric, Ischemia, Gallstone, Ileus results.
