### Editorial Letter

I pleased to mention you that Case Report could be defined as a scientific documentation of a clinical observation which involves a detailed study of all the perspectives & parameters that come into play during the execution of a particular study, whether it might be a clinical / experimental study on a particular subject or a medical / surgical treatment. Case reports enable an individual to get a clear, relevant, and a timely study design that helps in understanding the case abruptly, which helps in directing the treatment in a right & necessary way. Moreover case reports have a great importance in advancing the scientific knowledge especially in the cases of rare diseases.

International Journal for Case reports is broad scope, peer reviewed journal that covers all aspects of clinical specialties and medical sciences. International Journal for Case reports aims to keep scientists, clinicians and medical practitioners, researchers, and students up-to-date by publishing interesting articles on the on-going research of their relevant field. This open access journal allows outstanding quality articles to maintain the standard of journal and to obtain high impact factor. Journal welcome case reports that are of great importance in every field of scientific research such as clinical, medical, surgical, analytical, and diagnostic fields.

International Journal for Case Reports dedicated to publish unique, unusual case reports and case series which may enhance the knowledge about disease process, its diagnosis, management and clinico-pathologic correlations. We will consider manuscripts of any length; we encourage the submission of both substantial full-length bodies of work and shorter manuscripts that report novel findings that might be based on a more limited range of experiments.

The writing style should be concise and accessible, avoiding jargon so that the paper is understandable for readers outside a specialty or those whose first language is not English. Editors will make suggestions for how to achieve this, as well as suggestions for cuts or additions that could be made to the article to strengthen the argument. Our aim is to make the editorial process rigorous and consistent, but not intrusive or overbearing. Authors are encouraged to use their own voice and to decide how best to present their ideas, results, and conclusions. Although we encourage submissions from around the globe, we require that manuscripts be submitted in English. Authors who do not use English as a first language may contact us for additional information. As a step towards overcoming language barriers on acceptance of the paper, we encourage authors fluent in other languages to provide copies of their full articles or abstracts in other languages. We will publish these translations as supporting information and list them, together with other supporting information files, at the end of the article text.

IPIJCR follows unbiased reviewers approval followed by editor's approval is needed for acceptance of any manuscript, in the end editor decision is final, ie., the double-blinded review process (which means authors does not reviewers and the reviewers does not know editors). IPIJCR is an Imedpub publisher with one thousand+ conferences in 2019, across the USA, Europe & Asia. In 2019, IPIJCR has completed a decade in publication history with the support of authors and their research works. In these 3 years, the articles were published with rapid peer-review process and we are expecting to do so in future. For the year 2019 IPIJCR launched its third volume and third issue with research, review commentary, and many more articles. IPIJCR thanking all of the editors, and reviewers who have made the journal a success of the year 2019. We promise all of the readers that we do our level best in the upcoming year2020.
