### Editorial

I am pleased to announce the Journal of lung, a rapid peer-reviewed journal, which offers researchers and scientists the opportunity to explore and publish the fundamental, advanced and recent scientific developments in the field of lung. The Journal of lung is highly useful to asthma and lung cancer, medical students and a resource for clinical practice, as it clearly describes the essential scientific information on asthma, lung disease assessment as well as reproductive health study related to diseases. This journal also covers the entire study on asthma, mesothelioma, and lung cancer as well as applied research on lung disease education. The Journals tend to prosper and publish the most complete Source of discovery and accurate details on the findings and in all areas of the field, recent advances in the mode of original papers, analysis, articles, case reports, short communications, etc. make them freely accessible online without any limitations or any other subscriptions to researchers worldwide.

The journal of Lung in Clinical Practice, Journal of lung disease & Journal of pathophysiology of lung, journal of pulmonary medicine and respiratory research. As an original publication, review papers, case reports, brief correspondence, Solid weight the executives among teenagers is basic, especially as they set up freedom and settle on more decisions outside of the home condition, concerning diet and physical movement practices.

Authors can submit manuscripts and monitor their progress, hopefully for publication, through the online tracking system. As

any report to be published publicly cumulatively covers 45 days from the date of receive. The time period for different processes including quality control, peer review, and paper preparation is taken from 4 to 5 weeks. Performance reviews and peer review processes are completed within 14 days, and the deadline for submission is just 7 days after the reviewers and editors have accepted.

### Scope of the Journal

**Lungs Biology:** Lung is the sponge-like, perforated, elastic vascular organ, which is situated inside of the chest cavity covering most of the lower respiratory tracts. The most crucial task a lung performs is the exchange of oxygen and carbon dioxide.

**Lungs Function:** Lungs are basically a sack of elastic tissue located below the rib cage and above the diaphragm. They are an important part of the respiratory system and assist in excretory waste management in the body. Breathing is one important part of the respiration which provides our bodies with a continuous supply of oxygen. Oxygen is the fuel of life which keeps us all alive.

**Lung Pathology:** Pathological examination of lung is the key element in the confirmatory diagnosis of a variety of malignant and non-malignant respiratory disorders, which directs the treatment paradigm accordingly. Research has contributed to important advances in the pathological diagnosis of these respiratory disorders.
