## Developments in Trauma and Orthopedic Nursing

**Received:** April 10, 2020; **Accepted:** April 24, 2020; **Published:** April 30, 2020

On behalf of the Board of Advances in Trauma And Orthopedic Nursing Journal (IPTON), I am glad to present the Volume 3, Issue 1 of the journal. The journal established in 2017 has now published 7 issues with three issues in a year. Articles published in our journal are getting more citations and exposure all around the world. All these are promising signs. We could reach this stage through the constant support of Board Members and intellectual generosity of the readers and contributors (authors and reviewers). One of the objectives of this journal is to encourage publication from different streams of research that helps to enrich further the discourse on advances in crop technology.

First and foremost, I express heartfelt appreciation to all authors and reviewers of the 3 year of Advances in Trauma and Orthopedic

Nursing Journal (IPTON) on behalf of the entire editorial board and the publisher. It was with the mere co-operation, enthusiasm, and spirit of the authors and reviewers we could make IPTON a grand success.

### Highlights

I am pleased to mention that during the year 2019, all issues of volume 3 were published online well within the time and the print issues were also brought out and dispatched within 30 days of publishing the issue online.

Readers can particularly notice progress made in this direction through the special issue which is emerging as an important section of this journal. We take this opportunity to thank the authors/publishers for sending their knowledgeable articles. Special issue is now being handled by Dr Giuseppe Murdaca, one of the Chief Editor of this journal. I am sure with his efforts the journal will be able to strengthen the links between crop technologies and others recent trends in agriculture.

databases. At many

instances' members of the editorial board also prefer to submit their articles. Such practice is common in other reputed specialty Journals. In fact, journal encourages editorial board members to actively contribute. All scientific manuscripts including editorials are subjected to peer review. Journal follows a double-blind peer review process where identity of authors and reviewers is not revealed to each other. The review generally involves two to six subject experts. The editorial team consisting of associate editors and assistant editors are involved in the entire article cycle starting from submission to final recommendation. The entire review process is carefully structured so as to minimize possibility of bias.

I would also like to express my gratitude to all the authors, reviewers, the publisher, the advisory and the editorial board of IPTON, the office bearers and staff of IPA secretariat [4] for their support in bringing out yet another volume of IPTON and look forward to their unrelenting support.
