

Enhanced Surgical planning

Stefano Palma

Founder of For-Mat Srl

Abstract

Medical-Note develops software and apps for healthcare professionals, User-friendly for Interdisciplinary Care Team (ICT) while following patients' care planning. Useful for surgeons during surgical planning. Smart for Scientific studies thanks to an internal database and an automatic statistics system. Apps developed internally for individual surgical specialties help improve surgical planning, connect team doctors, follow the patient from home, and collect and collect data in all centers. Medical-Note offer 3D digital technologies for an exact reproduction of the traditional diagnostic imaging, CT, MRI, 3D Ultrasounds in digital files, generating 3D images and 3D print. Thanks to our Augmented reality devices, surgeons can navigate in the 3D model during surgical procedures. Complete services from planning to procedures. our ESP, Enhanced Surgical Planning, offers a full service also on-demand and above all scalable given the sale through the apps that are developed peer individual surgical specialties and published on the stores, therefore potentially, our services can be purchased anywhere. Our business model is to produce and distribute free apps to hospitals to healthcare professionals and patients to disseminate and sell high-tech services at affordable prices with the on-demand system or with annual subscriptions with devices useful for professional activity on free loans.
