

Factors affecting adoption of organic Practices by small farmer in Mahasarkham,Thailand

Orawan srisompun

Department of Agricultural Technology, Faculty of Technology, Mahasarakham University

Abstract:

The Thai government has a policy to promote jasmine rice production in an organic system, but the adoption of an organic approach remains at low levels. This study aimed to analyze factors that influence the adoption of organic rice cultivation by farmers in Maha Sarakham province, Thailand, by using the concept of sustainable living together with a logistic regression model. Purposive sampling was used to recruit a sample group of farmers from 160 households that were cultivating organic and conventional rice in Maha Sarakham

Biography:

Orawan Srisompun has completed her PhD at the age of 29 years from Kasetsart University. She is the lecturer at department of Agricultural Technology, Mahasarakham University. She has published more than 25 papers in Thailand and International journals.
