## Abstract

The highlight of the conception of healthcare gravitates to prevention of the onset and control of progression of diseases of various types. Our main task is to stimulate researchers from all over the world to proclaim their scientific interests and scopes of profound investigations and to publish the results of their studies. The Journal of Healthcare and Hygiene gives valuable opportunities for sharing experience among specialists in a world-wide range.

## Editorial article

The fundamental purpose of contemporary healthcare industry consists in providing favorable conditions for the individual to enjoy good personal health and in maintaining proper health status on the level of population. The highlight of the conception of healthcare gravitates to prevention of the onset and control of progression of diseases of various types, thus preserving normal physiological, anatomical and morphological traits of the body and ensuring adequate systems' functionality in the context of social well-being and comfort.

Healthcare associates with maintenance of proper hygiene standard related to prevention from and control of nosocomial infections, strict observance of the rules and principles of aseptic and anti-septic activities, control of susceptibility to communicable diseases, health policies addressed to mothers and children.

Our main task is to stimulate researchers from all over the world to proclaim their scientific interests and scopes of

profound investigations, to express their outlook on a great variety of matters, concerning medical science and practice, to publish the results of their studies.

The electronic variation of the Journal of Healthcare and Hygiene and the open access give great, valuable opportunities for sharing experience and exchanging knowledge among Medicine and Dental Medicine specialists in a world-wide range.

The conceptual organization and design of the Journal of Healthcare and Hygiene facilitate estimation of different points of view in the frames of fruitful discussions. This provides enhancement of the level of theoretical and practical achievements in a large number of aspects of Medicine and Dental Medicine, regarding technological improvements, innovations, optimization of human resources utilization, integrity and sequence of performance of prophylactic and therapeutic procedures, as well as encouragement of researchers to work in teams.

In essence, the Journal of Healthcare and Hygiene is a platform of substantial agreement on stimulation and support of far-sightedness and vast-ranging trends to attainment of personal physical, psyche-somatic and emotional welfare. That is obtainable namely in conditions of intensive, effective collaboration among researchers in harmony with needs and requirements of the unique personality and society as a whole. Interrelations based on sharing professional experience, skills and knowledge in the context of the Journal of Healthcare and Hygiene serves as an excellent behavioral pattern of compliance, and the consequences of its implementation are explicit, namely improved healthcare conditions for everyone, increased quality of life and better self-esteem of people, not overburden with negative short- and long-term effects of diseases.
