

## 29th Euro-Global Neurologists Meeting

### Mitra Assadi

Director of the Headache Medicine and Pediatric Neurology, Rutgers University, USA), E-mail: [mitra.assadimd@gmail.com](mailto:mitra.assadimd@gmail.com)

Brain is one of the largest and most complex organs in the human body and it is the command center for the human nervous system. Neuroscience is the study that enables us to understand the brain biology and body function. The chemical imbalance in the brain leads to various neurological disorders. The study enhances researchers to find ways to prevent or treat problems that affect the brain, nervous system, and body.

There are many ongoing research projects all over the globe to find new methods and pathways for better healthcare towards brain and its associated disorders. Research on brain is a never-ending thirst for neuroscientists. The more you explore is the more you wonder about the mysterious impressive organ.

EuroSciCon delighted to invite the global neurology community to the 29th Euro-Global Neurologists Meeting scheduled during June 15-16, 2020 in Rome, Italy. Rome is the capital and special commune of Italy. Rome is a nationwide and major international centre for higher education, containing numerous academies, colleges and universities. Rome today is one of the most important tourist destinations of the world, due to the incalculable immensity of its archaeological and artistic treasures, as well as for the charm of its unique traditions.

Theme: Current Challenges and Innovations in Neuroscience and Neurology

The upcoming Neurologists Congress 2020 unites the prime researchers to cover the latest cutting-edge topics in Neurology and Neuroscience, Neurological Disorders and Neurosurgery, Neurodegenerative Disease, CNS

Disorders and Infections, Pediatric Neurology, Geriatric Neurology, Neurophysiology, Neuromuscular Disorders, Neuroplasticity and many more interesting topics.

The neurological disorders are affecting people worldwide. According to a latest research each year more than 6 Million people die because of stroke; over 80% of these deaths take place in low- and middle income countries. More than 50 million people have epilepsy worldwide. It is estimated that there are globally 47.5 million people with dementia with 7.7 million new cases every year - Alzheimer's disease is the most common cause of dementia and may contribute to 60–70% of cases. The prevalence of migraine is more than 10% worldwide. Neurological disorders pose a large burden on worldwide health. The most recent estimates show that the neurological disorders included in the Global Burden of Disease (GBD) Study—Alzheimer's and other dementias, Parkinson's disease, multiple sclerosis, epilepsy, and headache disorders (migraine, tension-type headache [TTH], and medication-overuse headache [MOH])—represent 3 percent of the worldwide burden of disease.

The neurological burden of disease is expected to grow exponentially in low- and middle-income countries (LMICs) in the next decade. Patients with neurological disorders often require significant social and economic support because of physical, cognitive, and psychosocial limitations.

The common goal of improving the quality of life for patients with these disorders can only be achieved by sharing one's experience and knowledge with the neurological community. Join in our 29th Euro-Global Neurologists Meeting scheduled during June 15-16, 2020 in Rome, Italy to meet, learn and share your novel research work. We hope this conference will be one of the best among the Neurology Conferences series which will be the prominent eventuality for harmonious researchers of neuroscience and neurology around the globe to share and network.

Organizing Committee Members:

1. Mitra Assadi, Director of the Headache Medicine and Pediatric Neurology, Rutgers University, USA
2. Marco Carotenuto, Associate Professor, University of Campania Luigi Vanvitelli, Italy
