

Plant diversity and their significance of Adikavi Nannaya University Campus

J. Prakasa Rao

Department of Botany, Andhra University, Visakhapatnam-530 003, Andhra Pradesh, India

ABSTRACT

Documentation of existing green spaces of an area is important to determine existing resources and to set target for future improvements. Adikavi Nannaya University located between 17°3' 54.53" N and 81°52' 22.80" E in Rajamahendravaram (Rajahmundry) in South India. During 2014-2015 explorations were undertaken, contributed 236 species, 182 genera belongs to 62 families and two species additions to the flora of East Godavari District. It is necessary to develop botanical gardens with native, red list and medicinal plants, to create awareness on conservation of precious plant diversity in the educational institutes and Universities.

Keywords: Conservation, plant diversity, Red list Medicinal Plants, Rajahmundry, Wild edible Plants

INTRODUCTION

Documentation of existing green spaces of an area is important to determine existing resources and to set target for future improvements. Floras serve as the basic reference of the plant biota of an area; they are critical tools that serve botanists, conservationists, ecologists, foresters, gardeners, agronomists, researchers, and the general public. The botanical exploration of an area and writing a flora to summarize that information was seen as a basic societal need leading to the discovery of economically valuable information.

India is one of the twelve mega diversity countries of the world with a rich diversity of biotic resources [1]. India has 12 biogeographical provinces, 5 biomes and 3 bioregion domains [2]. Though the geographical area cover of the country represents about 2.4% of the world's total landmass, it harbours a total of 47,513 plant species [3] out of about 0.4 million hitherto known in the world, representing as much as 11.4% of world flora. There are 17,527 angiosperm species, under 2991 genera and 251 families in India, representing approximately 7% of the described species in the world [4]. However, the recent estimate accounts a total of 17,926 species of angiosperms in the country [5]. Flora of Andhra Pradesh accounts for about 2803 species belonging to 1051 genera under 185 families, which represents 16% of flowering plant species of India [6]. The flora of Andhra Pradesh [7], [8], [9], does cover East Godavari district. Moreover [10], [11], [12], [13], [14], [15], [16], [17] worked on the Flora of East Godavari District.

An understanding of the distribution of plants species in a region play an important role in elucidating the larger patterns of distribution of biodiversity. Documentation of the flora in University Campus is more helpful for the students and researchers. Objective of the present research is exploration of existed flora and assessment of their significance in the Adikavi Nannaya University Campus.

MATERIALS AND METHODS

Study area: Adikavi Nannaya University was established in 2006 and named 11th-century poet Nannayabhatta, who is revered as Adikavi (the first poet) of Telugu literature. It is located between 17°3' 54.53" N and 81°52' 22.80" E with an average elevation of 14 m from the sea level and with red sandy soil (Fig 1). University campus is adjacent to national highway 16 in outskirts of Rajamahendravaram (Rajahmundry), Andhra Pradesh, India (Fig 2). The weather is hot and humid, with a tropical climate. The mean maximum temperature is 32 °C. The hottest season

is from April to June, with temperature ranging from 34 °C to 48 °C with maximum of 51 °C recorded in May 2002 and May 2007. The coolest months are December and January, when it is pleasant at 27 °C to 30 °C. There is heavy monsoon rain at the end of summer, with depressions in the Bay of Bengal. And an average rain fall of 1057.2 mm [18]. Teak and avenue trees are planted in the University campus. More than 70% of the University Campus is open land, occupied by luxuriant growth of herbs and bushes.

Field study: During the period of 2014-2015 explorations were undertaken covered rainy, winter and summer seasons to record plant species. All plant species were identified with the help of floras and literature [10], [7], [8], [9], [11], [12], [16]. Data such as botanical name, family, and habit significance were given. Local names were provided as far as possible. All the plant species are arranged according to alphabetical order of their family. The

family names of Bentham and Hooker's classification have been followed with recent changes. Nomenclature as far as possible has been made up-to date [19] (Table 1). Some of the important plants were prepared herbarium and deposited in Andhra University Herbarium. Some of the plant photographs were provided for easy identification (Fig 7-9).

RESULTS

A total of 236 species, 182 genera belongs to 62 families were reported from the Adikavi Nannaya University Campus (Table 1). Among the 236 species dicots are 210 (88.98%) and monocots are 26 (11.01%) were reported (Fig 3). According to life forms highest number of herbs 110 (46.61%) followed by climbers 39 (16.52%), trees 39 (16.52%), shrubs 30 (12.71%), grasses 15 (6.35%) and parasites 3 (1.27%) were reported (Fig 4). Among the 236 species highest numbers of plants 217 (91.94%) species are naturally growing, 19 (8.05%) trees are introduced in to the campus for avenue and ornamental purpose and 20 (8.47%) trees are naturally growing in the University campus.

Among the 182 genera 4 genera (2.19%) *Senna*, *Ipomoea*, *Phyllanthus* and *Indigofera* are the dominant genera with 4 species followed by 9 (4.94%) genera *Alternanthera*, *Cleome*, *Merremia*, *Crotalaria*, *Tephrosia*, *Sida*, *Ficus*, *Solanum* and *Grewia* with 3 species, 24 (13.218%) genera are with 2 species and 145 (79.67%) genera with only single species were reported.

Fabaceae is the most dominant family with 24 (10.16%) species followed by Euphorbiaceae 13 (5.50%) species, Poaceae 12 (5.08%) species, 2 families Amaranthaceae and Convolvulaceae with 11 (4.66%) species, 2 families Caesalpiniaceae and Malvaceae with 10 (4.23%) species, Rubiaceae with 9 (3.81%) species, 2 families Acanthaceae and Asteraceae with 8 (3.38%) species, Tiliaceae with 6 (2.54%) species, 6 families Apocynaceae, Boraginaceae, Lamiaceae, Minosaceae and Rutaceae and Vitaceae are with 5 (2.11%) species, Solanaceae with 4 (1.69%) species, 12 families Aizoaceae, Arecaceae, Asclepiadaceae, Bignoniaceae, Capparaceae, Cleomaceae, Cypraceae, Liliaceae, Moraceae, Sapindaceae and Scrophulariaceae and Sterculiaceae are with 3 (1.27%), 6 families Commelinaceae, Flacourtiaceae, Menispermaceae, Molluginaceae, Rhmanceae, and Verbenaceae are with 2 (0.84%) species and remaining 25 families are with only single species were reported from the University campus.

Senna uniflora and *Cyphostemma setosum* are the new additions to the flora of East Godavari District, which was not reported by earlier researcher [11]. *Senna uniflora* (Syn: *Cassia uniflora*) is the first time reported from Telangana region (Mahabubnagar District) of the Andhra Pradesh by [20], now it is spread in to East Godavari District of Andhra Pradesh.

Ipomoea aquatica and *Neptunia oleracea* are the free floating, *Aeschynomene aspera*, *Aeschynomene indica*, *Aponogeton crispus*, *Cyperus exaltatus*, *Nymphaea nouchali*, *Ludwigia perennis*, *Typha domingensis* are submerged aquatic plants growing in the campus. Xerophytic plants like *Asparagus racemosus*, *Opuntia dillenii*, *Sansevieria roxburghiana*, *Cissus quadrangularis* etc. and parasitic plants like *Cuscuta reflexa*, *Cassytha filiformis* and *Striga asiatica* are also naturally growing in the campus. *Alternanthera paronychioides*, *Chromolaena odorata*, *Parthenium hysterophorus* and *Hyptis suaveolens* are the most dominant invasive alien species in the campus.

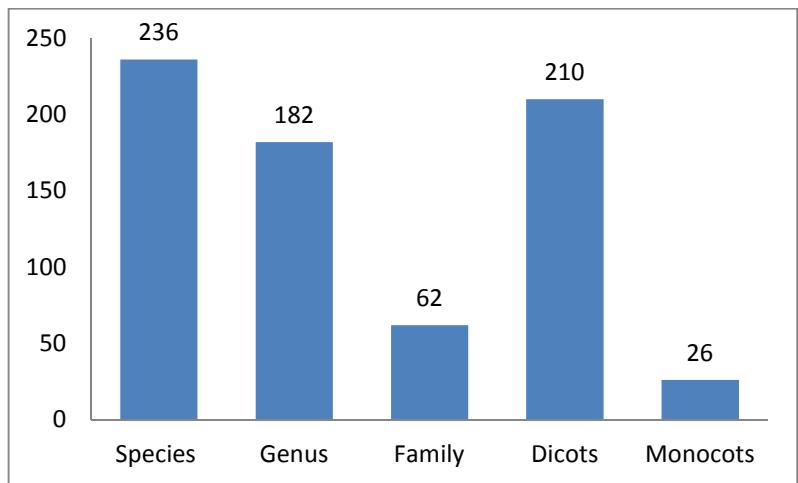

Fig 3. Details of species richness, genus and families of the study area

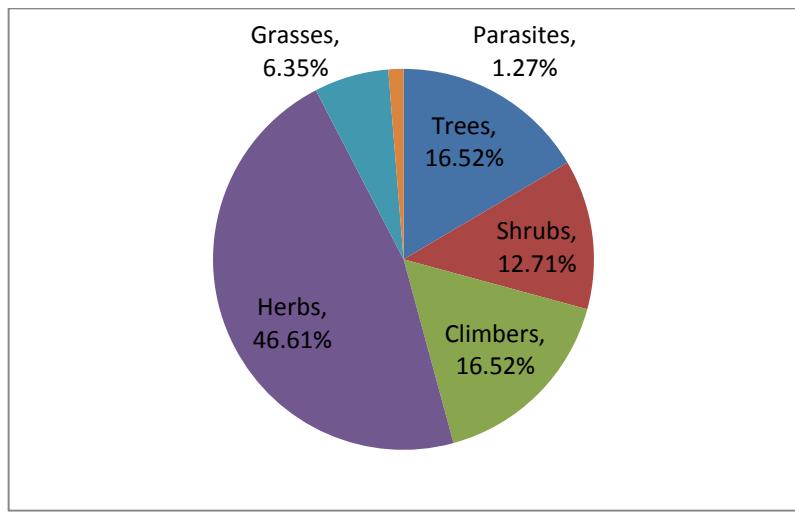

Fig 4. Percentages of different life forms in University campus

Among the 236 species, all the plants were identified as medicinal plants for various diseases [21]. Six (2.54%) plants *Aegle marmelos* (Vulnerable), *Cayratia pedata* (Vulnerable), *Dalbergia latifolia* (Vulnerable), *Gloriosa superb* (Vulnerable), *Gymnema sylvestre* (Vulnerable) and *Operculina turpethum* (Least Concerned) are red list medicinal plants in Andhra Pradesh [22], these medicinal plants are naturally growing in the University campus. Other most valuable medicinal plants like *Andrographis paniculata*, *Achyranthes aspera*, *Aerva lanata*, *Holarrhena pubescens*, *Aristolochia indica*, *Hemidesmus indicus*, *Eclipta prostrata*, *Evolvulus alsinoides*, *Jatropha gossypiifolia*, *Phyllanthus amarus*, *Abrus precatorius*, *Clitoria ternatea*, *Curculigo orchoides*, *Ocimum tenuiflorum*, *Strychnos nux-vomica*, *Azadirachta indica*, *Tinospora cordifolia* and *Helicteres isora* are also naturally growing in the campus.

A total of 67 (28.38%) wild edible plants, 12 (5.08%) crops related wild species and 2 (0.84%) fruiting trees (*Annona squamosa* and *Cocos nucifera*) were reported. Among the 67 wild edibles species 35 (14.83%) species are wild edible fruits, 34 (14.40%) species are wild edible leafy vegetables, 2 (0.84%) species (*Cajanus scarabaeoides* and *Sapindus emarginatus*) are wild edible seeds and 1 (0.42%) species (*Asparagus racemosus*) is wild edible tubers were identified (Table 1, Fig 5). A total of 161 (68.22%) species are only used as medicine, 31 (13.14%) species are used as both wild edible fruits and medicine, 26 (11.02%) species are both wild edible and medicine, 6 (2.54%) species are used as both crop related wild species and medicine, 3 (1.27%) species are used as wild edible, crop related wild species and medicine, 2 (0.85%) species are used as edible fruits and medicine, 2 (0.85%) species are used as wild edible leafy vegetable, wild edible fruits, crop related wild species and medicine. 2 (0.85%) species are used as wild edible leafy vegetable, wild edible fruits and medicine, 1 (0.42%) species is used as wild edible leafy vegetable, wild edible tubers and medicine, 1 (0.42%) species is used as wild edible seeds, crop related wild species and medicine and 1 (0.42%) species is used as wild edible seeds and medicine were reported from the university campus (Table 1, Fig 6).

DISCUSSION

Various researchers worked on different University campus floras, from Andhra University reported 167 tree species [23], Pondicherry University 537 species [24] and Banaras Hindu University 415 species [25] were reported. When compare with these researches, present research contribution of 236 species from Adikavi Nannaya University campus revealed that University campus is the rich in plant biodiversity. This data will more useful for the students and researchers of the University and others. From the present exploration, 2 plant additions (*Senna uniflora* and *Cyphostemma setosum*) to the Flora of East Godavari District from the University campus and 18 species (*Cycas sphaerica*, *Utricularia striatula*, *Albizia thompsoni*, *Bauhinia emarginata*, *Callicarpa tomentosa*, *Citrus medica*, *Cordia wallichii*, *Elaeocarpus tectorius*, *Ficus auriculata*, *Flacourzia jangomas*, *Lasiococca comberi*, *Miliusa velutina*, *Nothopegia heyneana*, *Putranjiva roxburghii*, *Saraca asoca*, *Solanum giganteum*, *Toona ciliata* and *Vitex leucoxylon*) additions to the Flora of East Godavari District by [13], [14], [16] in recent explorations is indicating that Flora of East Godavari District is needs to be revision for new plant additions. Occurrence of the 236 medicinal plants, 67 (28.38%) wild edible plants, and 12 (5.08%) crops related wild species demonstrating University campus is a good resource for economically important and medicinal plant species. This information will useful for the researches in the University researchers and others in future.

CONCLUSION

Occurrence of the red list medicinal plants in the University campus is indicating that University campus is suitable for conservation of ecological sensitive plants, so there is a chance to develop red list medicinal plant garden in the University campus through ex-situ and in-situ conservation. It will be useful for the students and researchers of various departments in University and also for others. It is necessary that University authorities' needs to focus on introduce rare and endemic forest plants for development of the University greenery without common and exotic plants. It is also useful for the conservation of rare and endemic plants, in the University campus as well as creates awareness on threatened native plants.

Acknowledgments

Author is thankful to Adikavi Nannaya University Vice-Chancellor, Registrar and other staff members and also grateful to B.Venkateswara Rao, Dr. J.Suneetha, Dr. C.S.Reddy, Mr. K.V.Satish, Dr. S.B.Padal, Dr. M.Venkaiah, Dr.O.Aniel Kumar, Dr.Y.Israel, Dr. A.J.S. Raju, Dr. P.S.Rajashekhar and Mrs. J. Rajamani for their great encouragement during the study. Author is also special thanks to Mr.I.Pradeep (Baby) for his great help during the field visits.
