Dermatology is a branch of medicine that deals with the skin and diseases of the skin. It concerns the study, research and diagnosis of normal skin and disorders of the skin. Cancers, cosmetic and aging conditions of the skin, fat, hair, nails and oral and genital membranes are all aspects of dermatology. Clinical Dermatology consists of the evaluation and treatment of skin conditions and skin disease. Redding Derm's high level clinical dermatology competence is of great comfort to patients of all ages seeking diagnosis and treatment of common or rare skin conditions. Skin aging will either be due to external and internal factors. With age, the metabolism decreases on a cellular level, and replenishing of skin cells slows down that decreases the firmness of skin structure. External factors like the growing exposure to sun, dust, pollution, smoking, etc. can also create premature aging by dehydrating the skin and increasing the amount of free radicals within the skin.
