

The fibula free flap (FFF)

Ilaria Giudiceandrea

University of Westminster, United Kingdom

Abstract

The fibula free flap (FFF) constitutes the gold standard surgical approach for mandibular reconstruction. Mandible reconstruction is routinely performed in high-volume academic centers. To our best knowledge, this is the first case series exclusively dedicated on FFF conducted in community hospitals. This study evaluates our 10-year experience with FFF mandible reconstruction in two community hospitals.

Biography

I am a physician who completed the Foundation Program in August 2020. Actively worked in a red hospital frontline during the COVID19 pandemic. Currently a Junior Clinical Fellow in Ear Nose and Throat Surgery in The Grange Hospital, Newport Wales.
