

The Public provision of emergency obstetric care in Pakistan

Ashfa Hashmi

Tianjin Medical university

Abstract:

Pakistan is one out of five countries where together half of the global neonatal deaths occur. As the provision of services and facilities is one of the key elements vital to reducing this rate as well as the maternal mortality rate, this study investigates the status of the delivery of essential obstetric care provided by the public health sector in two districts in Khyber Pakhtunkhwa in 2015 aiming to highlight areas where critical improvements are needed.

Biography:

Wei Liu has graduated from Tianjin Medical University at 2007. Since then, he has focused his research on the prevention of postoperative fibroblast proliferation of glaucoma surgery and the gene mutation detection of various inherited ocular diseases. He has published over 10 papers in peer reviewed journals internationally and more than 20 papers in peer reviewed Chinese journals
