

16th International Conference and Exhibition on Nanomedicine and Pharmaceutical Nanotechnology May 04-05, 2020 Webinar

Editorial Note

We had a huge success with the completion of **16th International Conference and Exhibition on Nanomedicine and Pharmaceutical Nanotechnology Webinar** on May 04-05, 2020. The significance of the meeting was achieved due to the accumulation of all the related group of spectators of research scientists to share their Knowledge, Research work, Technologies, and furthermore trade of worldwide Information towards the correct crowd at ideal time. Congress has received a generous response from all over the world. This has been organized with the aim of endorsing the development of new perceptions and ideas for investigating the high level of knowledge reached by scientific community in the field of Pharmaceutical Sciences.

The conference was organized around the theme *“New Nanomedicine Strategies to Eradicate COVID-19 Emissions”*. The congress entrenched a firm relation of future strategies in the field of Nanomedicine and Pharmaceutical Nanotechnology.

We would like to thank each and every participant of NanoPharma 2020 webinar to make this a huge success. And special thanks to media partners for the promotion of our event.

The **ConferenceSeries** Nanomedicine Conferences aim to bring together the prominent researchers academic scientists, and research scholars to exchange and share their experiences on all aspects of Pharmaceutical Sciences. It is conjointly a knowledge domain platform for researchers, practitioners and educators to gift and discuss the foremost recent advances, trends, and issues in addition as sensible challenges and solutions adopted in the fields of Nanomedicine and Pharmaceutical Nanotechnology.

Medicine has developed throughout time but has remained forever concerned with the maintenance of health and thus the science of prevention and alleviation, and ultimately curing, of disease. To continue its development in new directions, medicine is now looking to nanomedicine, an emerging scientific specialty born from nanotechnology, which has grown up in the fields of engineering, physics, chemistry and biotechnology, and is now moving into medicine, with huge potential for expansion and development over the next decade and beyond. Nanomedicine is a uniquely addressing the important challenges and advances in medical nanoscale-structured material and devices, biotechnology devices and molecular machine systems and nanorobotics. Nanomedicine and Pharmaceutical Nanotechnology is a valuable information source for all players in the field - academic, industrial and clinical researchers, pharmaceutical and biotechnology companies, regulatory authorities and others across the scientific community.
