

Application of laser in medicine (treatment and diagnosis)

Ehsan Kamani

Shahid Beheshti University of Medical Sciences, Iran

Abstract

In the name of Creator of Light

Laser is a technology used in various medical fields.

After the revolution, Penny Celine has been in the medicine of this laser, which has revolutionized medicine

I have studied and studied laser applications in medical sciences, and I have been able to get the right information in this area.

1. Application of laser in drug delivery of cancer tissue: Using a laser and a method for making drugs with nanoparticles, we can use the laser wavelength and appropriate selection of drugs and nanoparticles to target tissues that are used in drug delivery. People with cancer have an important role in minimizing the side effects of chemotherapy

2. Application of Lasers to Improve Endocrine Activity: By using appropriate wavelength lasers and energy, we can influence the process of recovery of the activity of the glands, which is used to improve the thyroid gland, pancreas and saliva.

3. Application of laser in lowering blood pressure: Using low-level lasers can be treated intraarticular and topically in the process of reducing blood pressure.

4. Laser application in blood cell proliferation: We can play an important role in laboratory culture using laser light and proper wavelength in the process of white blood cell proliferation, red blood cells, and platelets. This process is important in patients with over-the-counter It will play an important role.

5. Laser application in the treatment of depression: This method will be performed using appropriate light and energy

6-Application of Lasers in Acupuncture: Using a low-power laser and appropriate acupuncture points, we can treat the following illnesses.

1 - Obesity 2 - Depression 3 - Impotence - Muscle pain 5 - Paralysis

7. Application of laser in preventing ulcers in chemotherapy patients

8. Application of laser in wound healing of diabetic people

9-Laser application in the treatment of fungus nails with specific color and appropriate laser length

10. Making laser machine for diagnosis as soon as possible

All of these projects will be an important contribution to the recovery of patients and will promote the development of laser medical science. I now need research opportunities and scholarships.

Biography

My goal is to promote the science of laser medicine for the health of the people of the world.

I am Ehsan Kamani was born in 1994 in Iran. I am a graduate of the field of optics and laser engineering. I started studying and Research the use of lasers in medicine since 2014. I am mighty in the field of laser medicine research and treatment . I am eager to learn and study further . I have an intense internal drive and passion, and the willingness to take a chance, to fail if necessary, and to start the process all over again. I have a passion for research to be able to make life better for people affected by diseases and it is far more important than anything to me. Working in a place nearby cancer department of Shohada University and watching patients affected by cancer complications made me think how I can help these people.when I face new issues,I look at it and think, 'that seems interesting, that could be an area I could make a contribution in,maybe I can make a difference' then I invest myself in it," "I take my time and life to do it, I encounter challenges and make my way through it.I choose University due to the chance that has given to me with its superb reseach expertise.Reasearch is my passion.

But, unfortunately, I am not supported in my country and I am looking for an active scholarship and group to advance the goals.

Publications

1. Role Low-Power Blue Laser With a Wavelength of 405 Nm in Increasing the Level of Nitric Oxide in Increasing the Resistance of Cells to the Virus (CO-VID-19) and its Effect on Virus (COVID-19) Mortality in Vitro, April 2020
2. Effect of Low Level Yellow Laser Light 589nm on Virus Prevention Corona Virus (COVID-19),March 2020.
3. Evaluation the Effect of Low Level Laser on Liposomes Containing Chemotherapy Drug (Docetaxel) and Compare with Prescribed Chemotherapy Drugs (Docetaxel) Procedure in Prostate Cancer Cells in Vitro, June 2019, DOI: 10.4172/2376-0427-C1-012
