Abstract

The cities are developing so fast more than the natural resources can recover their regular properties and some design projects do not satisfy the basic needs of inhabitants. In general, urban planners, engineers, and architects involved in the city transformation must collaborate with the health sector and especially with professionals in the nursing community field. It would be a big mistake for the health sector not to participate in the development of urban health for they are the ones who really know both, the built spaces and the real population needs. A healthy city can develop a sustainable and responsible economy by creating just cities, and thus avoiding the immigration process that seeks to improve a quality of life that is not found in the local community. There is a solution to the problem of identity and the impact of globalization for the evolution of new built environments or the revitalization of the city, and for all diseases in the world. The most effective method to combat this urban malady is prevention and should generate alerts to implement assertive, efficient, and effective prevention programs since these emerging symptoms are a direct product of social, economic, and environmental inequality. The advantage of globalization is that it has a world-class staff trained to do so: the community nurse. Community’s nurse is among the best professionals trained to generate changes in a given neighborhood which would then return identity to citizens. In fact, prevention is their distinctive expertise. Basically, community nurses are able to take action by stopping something from happening or arising into the health field. They can also develop action plans and promote the community’s urban health.

Biography:

Claudia Macías Carrillo has completed her Science master at the age of 29 years from National Institute of Public Health. Actually she is attending Doctoral Degree studies at Universidad Autónoma del Estado de Morelos, MX. She is a full time Professor, UAEM Nursing. She has published in reputed journals and has been serving as Academy biopsicosocial Coordinator and work with a Health Heart Foundation. Toronto, CA. and World vision health programs.

Speaker Publications:

1. “Lactancia materna y diarrea aguda en los primeros tres meses de vida”
2. “Breast feeding and the incidence of acute diarrhea during the first three months of life”
3. “Prevalence and correlates of hearing loss”
4. “Prevalencia de la pérdida auditiva y factores correlacionados en una industria cementera”
5. “Prevalence of hearing loss and correlated factors in a cement plant”

31st World Nurse Practitioners & Healthcare Congress, Webinar- April 29-30, 2020
