

Conference Announcement of World Heart Congress

Marco Piciche

Cardiac Surgeon, Cardiology Department, San Bortolo Hospital, Italy, E-mail: marco.piciche@libero.it

Introduction

The Cardiovascular diseases affecting the developed world have at their core atherosclerosis and hypertension, both of which are profoundly affected by diet and can be approached, at least in part, from a nutritional point of view, as can the increasing “epidemic” of obesity. Diet is a multi-component mixture of many nutrients, which may interact with one another. The definitive study of nutrients and their impact on cardiovascular disease can be a daunting enterprise. Many dietary risk factors contribute to these diseases in various environmental and ethnic settings. These risk factors are often in evidence in youth so that preventive measures must be initiated early in life.

Cardiovascular disease is the leading global cause of death, accounting for 17.3 million deaths per year, a number that is expected to grow to more than 23.6 million by 2030. Of these deaths, an estimated 7.4 million were due to **coronary heart disease** and 6.7 million were due to stroke.

The World Heart Federation (WHF) unites 200 members spanning 100 countries in the fight against cardiovascular disease. Global Data research predicts the worldwide market for CMD devices will reach \$1.2 billion by 2020.

We welcome all the participants across the globe to attend our upcoming **World heart Conference** is scheduled to be held in Rome, Italy during June 15-16, 2020. The major highlights of our conference are coronary heart diseases, cardiovascular disease, interventional cardiology, cardiac nursing, cardiac surgery, vascular biology, cardiac regeneration, pediatric cardiology, cardiac remodeling, hypertension and case reports on cardiology.

So, 27th Edition of International Conference on World Heart Congress welcomes the, Professors, Research scholars, and Industrial Professionals, Cardiac Surgeons, Cardiologists, Physicians, and Student delegates from cardiology and healthcare sectors to be a part of it.

Rome, Italy's capital, is a sprawling, cosmopolitan city with about 3,000 years of internationally powerful workmanship, design and culture in plain view. Old demolishes, for instance, the Forum and the Colosseum inspire the energy of the previous Roman Empire. Vatican City, base camp of the Roman

Catholic Church, has St. Diminish's Basilica and the Vatican Museum.

Rome was the 11th-most-visited city in the world, 3rd most visited in the European Union, and the most popular tourist attraction in Italy. The city is one of Europe's and the world's most successful city “brands”, both in terms of reputation and assets. Its notable focus is recorded by UNESCO as a World Legacy Site.

The urban area of Rome extends beyond the administrative city limits with a population of around 3.8 million. Between 3.2 and 4.2 million people live in Rome metropolitan area.

Glimpses of Heart Congress 2019.
