Global burden of [nephrology](#) mortality is increasing drastically every year. According to WHO 10% of the population worldwide is affected by kidney diseases and approximately 65 million die each year. Kidney disease was ranked 16th in the list of causes of total number of deaths. Over 2 million people worldwide currently receive treatment with dialysis or a kidney transplant to stay alive. Of the 2 million people who receive treatment for kidney failure, the majority are treated in only five countries – the United States, Japan, Germany, Brazil, and Italy. Reflecting this imperative, we believe that professionally-oriented education in to cure Renal diseases is essential in the training of clinicians and clinical academics who will provide the future leadership in this key area for [global](#) health. Asia Nephrology 2020 aims to bring together leading academic scientists, researchers and research scholars to exchange and share their experiences and research results about all aspects of Nephrology. It also provides the chance for researchers, practitioners and educators to present and discuss the most recent innovations, trends, and concerns, practical challenges encountered and the solutions adopted in the fields of [Nephrology](#).

### Mortality rate in kidney diseases

In the world, every year at least 2.3 million people may have died because of kidney failure. In 2030 number of people receiving dialysis or kidney transplantation set to more than double to over 5 million. In USA every 1 in 3 adults is currently at risk for developing kidney diseases. The 9th leading cause of deaths in USA is kidney disease. In USA 6 lakh deaths are due to kidney diseases. It is being acknowledged that throughout USA more than 17,105 kidney transplantations took place in 2014 alone. In 2015, 11,570 came from deceased donors and 5,535 came from living donors. Every day 12 people die while waiting for a life-saving kidney transplant. For every 14 minutes an individual is added to the renal transplant list. In 2014, 4,270 patients died due to increasing the lag time for a kidney transplant. Another, 3,617 people became too sick to take delivery of kidney transplant. Medical Expenditures for individual patient per year with kidney disease increase from \$15,000 in stage 3 to \$28,000 in stage 4 to more than \$ 70,000 in stage 5. Every year, Medicare spent nearly \$ 28.6 billion to treat people with kidney failure. National kidney Foundation has provided more than \$100 million for research. Annually US

spent \$ 41 billion or 17% of their Medicare budget on people with kidney diseases.

There are several hospitals offering [kidney treatments](#) including dialysis and transplantation. They are well known for health care and fast recovery is promised from the hospital combined with a pleasant and suitable caring atmosphere. According to the global statistics they were nearly 11500 Hospitals in cites associated with kidney treatments and 17000 doctors of Middle East working in the hospitals.

### Importance & Scope

Nephrology conference has been fostering the need to control the impact of permanent renal disease within the public health environment. The lack of a systematized control provided through a measurable program has greatly impacted on the level of hospital expense since they have increased their case-mix risk, family economies deteriorate and health care pays for a higher morbimortality that could be avoided with better surveillance and epidemiological control. Nephrology Conference 2020 aims to bring together leading Researchers, Academicians, Physicians and Industrialists to exchange and share their experiences and research in order to decrease the incidence rate of kidney disease by new techniques and latest technologies.

This unique opportunity to hear the latest discoveries and network with global experts to discuss improving patient care, Renal Data System trends, and key findings at an open forum for providers to share best practices discussions about reducing hospitalizations, improving volume control, increasing the PD patient population, nutritional management and sodium modelling, and CKD education. The Organizing committee of Nephrology conference takes the honour of inviting Renowned nephrologists, renal transplantation surgeons, immunologists, Diabeticians, physicians, World-class surgeons, Young researchers, Business delegates and talented student communities working in the field of nephrology to share their research experiences and indulge in interactive discussions at the event.

**Target Audience**

Directors, CEO's of Organizations  
 Business Development Managers  
 Chief Scientific Officers  
 R&D Researchers from Pharma Industries  
 Professors, Associate Professors, Assistant Professors  
 PhD Scholars

[Patent Attorneys](#)

Investment Analysts  
 Association, Association presidents and professionals  
 Noble laureates in Health Care and Medicine  
 Nephrology Professionals

[Nephrologists](#)[Urologists](#)

Research Institutes and members  
 Supply Chain companies  
 Manufacturing Companies  
 Training Institutes  
 Business Entrepreneurs

[Pediatric Nephrologists](#)

Kidney Transplant Surgeons

[Nephrology Fellows & Nurses](#)

Dialysis Technicians

Medical Students
