Editor's Note

Clinical pathology is a medical specialty that is concerned with the diagnosis of disease based on the laboratory analysis of bodily fluids, such as blood, urine, and tissue homogenates

Molecular pathology is an emerging discipline within pathology which is focused in the study and diagnosis of disease through the examination of molecules within organs, tissues or bodily fluids.

Journal of Clinical & Molecular Pathology is a multidisciplinary peer-reviewed journal that publishes manuscripts on clinical pathology, anatomic pathology, and application of molecular biology, biochemistry, genetics, proteomics, chemistry, hematology and microbiology for the diagnosis of diseases. The journal focuses on the publication of manuscripts showcasing current concepts and techniques as well as novel findings in the field of clinical and molecular pathology.

As an editorial Board member for this journal I earnestly acknowledge the highlights and various articles published in 2019, A Review article entitled "Dental Pulp Capping: A Literature Review" which was written by Dhaimy S, et al. reveals the facts about The Evolution of Our Practice towards tissue preservation which is leading us towards the conservation of pulp vitality [1].

A literature review title "The success of pulp revascularization in pregnant women" which was written by Dhaimys, et al. [2] discuss about the pathological conditions in pregnancy presence a quite special period for healing and regeneration therapies which is categorised by high serum concentration of growth factors and pregnancy is the only periods that promotes the regeneration mechanisms in an adult person

An article which discuss "The biological approach of pulp revascularization - a literature review" reveals the root thickening and maturation obtained after revascularization is due to deposition of cementitious and bony tissue in canal this was written by Howmoddin A, et al [3].

As we all know lever plays a vital role in development and pathogenesis of diabetes type 1 and its terbetic involvement is likely to improve the status of patient with this type of disease. A well concluded articles titled "Liver and Diabetes : molecular and clinical outcomes" by ahed j alkhathib [4].

A combined literature review of "The combination utility of hbme – 1 Gelatin-3 and brafv600e mutations in the diagnosis of papillary thyroid carcinoma" [5].

On behalf of our editorial board members and our journal team we would like to thank each and every author and reviewers who constantly supported and encourage our journal to become a prestigious one and to serve the scientific community globally

The journal of clinical and molecular pathology earnestly anticipates renowned prominent researches across the globes to share their valuable presentations and noval ideas to the scientific community and readers by sharing their manuscripts in our upcoming issue.
