Diagnosis of rare pediatric diseases by Retcam imaging

Zeinab Elsanabary*University of Cairo, Egypt*

Retcam imaging is known for its use in early diagnosis of ROP, however, many rare pediatric diseases are detected by its widely professional use. The aim of this poster is to highlight the diagnosis of rare conditions as peripheral active toxoplasmosis, Aicardi syndrome, papilledema in Down's syndrome and multiple hamartomas in Tuberous sclerosis in infants.

Diagnosis of these conditions helped in their early management.

Keywords: Retcam, Aicardi syndrome, Hamartoma

Biography
