

**GOD BRAIN REALITY invention and the cancer recovery therapy as its first application****Ileana Loreley Nedelcu**

University of Politehnic Bucharest, Romania

**T**here are places on Earth in which there is no electricity, but they have a religion, a belief, in one God or in many and always as an external force. There are places on Earth where Science is something that they heard about, but the religion, the beliefs are their ruling God, their science, their Savior, their everything that keeps them in hope but also in a bond with that external force. The meta-analysis on the efficiency of the psychological therapies on cancer patients showed in Canada that as fast as a patient is relying on his own capabilities more than on the external supporters after the medical care is finished, as fast as they cure themselves. In other words as fast as the patients are succeeding to be out of the natural bond created between the patient and the team, or at least one of the medical care members, as fast their God is going to be in charge. Meaning their own brain's capabilities will be in charge to support better the natural regulation of the body and the coming back faster to the energy levels of the health state of the body. Having all these in mind and underlying the reality that GOD is actually the humanity's intuition of its own brain projected in the outer world, the GOD-Brain Reality become the most wanted reality that will help the patient and all the procedures involved medically, psychologically for the greatest benefits of the patient's recovery. The GOD BRAIN reality can be set in practice through a virtual reality device as well as through a classic interaction human to human.

**Biography**

Ileana Loreley Nedelcu has Bachelor Degree in Automation & Computer Science University of Politehnic Bucharest, Romania & L'Ecole Universitaire de Lille, France Bachelor Degree in Psychology University of Bucharest, Romania.
