

Global Summit on **NURSING CARE AND MIDWIFERY**

May 26-27, 2021 | Webinar

Kamishibai cards. A conversation about Patient Safety**Stephanie Stewart***Department of Nursing Practice*

Kamishibai (K) cards are a quality improvement process focused on improved bundle compliance and promotion of peer-to-peer feedback that the health system has used for a few years. Changing personnel structure and an emphasis on patient outcomes prompted a need to revamp the K Card process. A team approach was used to redesign the process resulting in a program that moved from utilization of champions to engaging all bedside nurses and having a standard completion requirement for all units. In 2 phases spanning 16 weeks, the nurse managers, point-of-care educators, and all bedside nurses were trained in the process using a computer-based training module and validated in the application of the process. By the end of the 16-week period, the completion compliance target was reached, and the system began to see a decrease in central line and Foley catheter device usage days. The result of the project design was a peer-to-peer feedback mechanism, which promotes evidence-based practices and system standards.

Biography

Stephanie Stewart has her expertise in promoting evidence-based practice in an acute care hospital system. Her work in facilitating K Cards for the health system promotes peer communication and professionalism. This process is based on the combined work of Nursing Shared Governance and the Department of Nursing Practice and Innovation.
