Introduction: (Minimum 600 Words)

Medicine is a branch of research deals with the enhancement of an organism's well-being, and it is connected to the subject of healthcare. It is a branch of science that treats and heals diseases and illnesses for which there is no treatment, such as autoimmune disorders like Lupus. Lupus, also known as Systemic Lupus Erythematosus (SLE), is a condition in which the immune system assaults the body's own cells, mistaking them for a foreign aggregation of the body. It primarily affects women. As a result, many Lupus studies have mostly concentrated on female patients, leaving the afflicted male community with little understanding about their situation and themselves.

Importance of Research: (Minimum 200 Words)

This study helps us to find the Lupus symptoms which can manifest itself in a variety of ways and are commonly misinterpreted as symptoms of other diseases. This is why it is known as "the great imitator" since it is difficult to identify. Lupus symptoms can range from mild to life-threatening, so it's critical to get a rheumatologist's diagnosis and treatment as soon as possible. This implies as you can control it with medication, but will not go away. Treatment can help you manage your symptoms, avoid flare-ups, and avoid other lupus-related health issues.
